

Title Global energy statistics
Name: Petr Kadlec, 485208

Task: Interaction with the main map

- User can select a year using the slider
- User can select visualisation type from menu
- User can see detailed info about a country in a selected year
- User can hover to see data used for the selected visualisation

Focus TIME SLIDER (YEARS)

NEUTR - Dropdown menu for different visualisations on the main map

YEL - how much of the consumption is import/domestic production

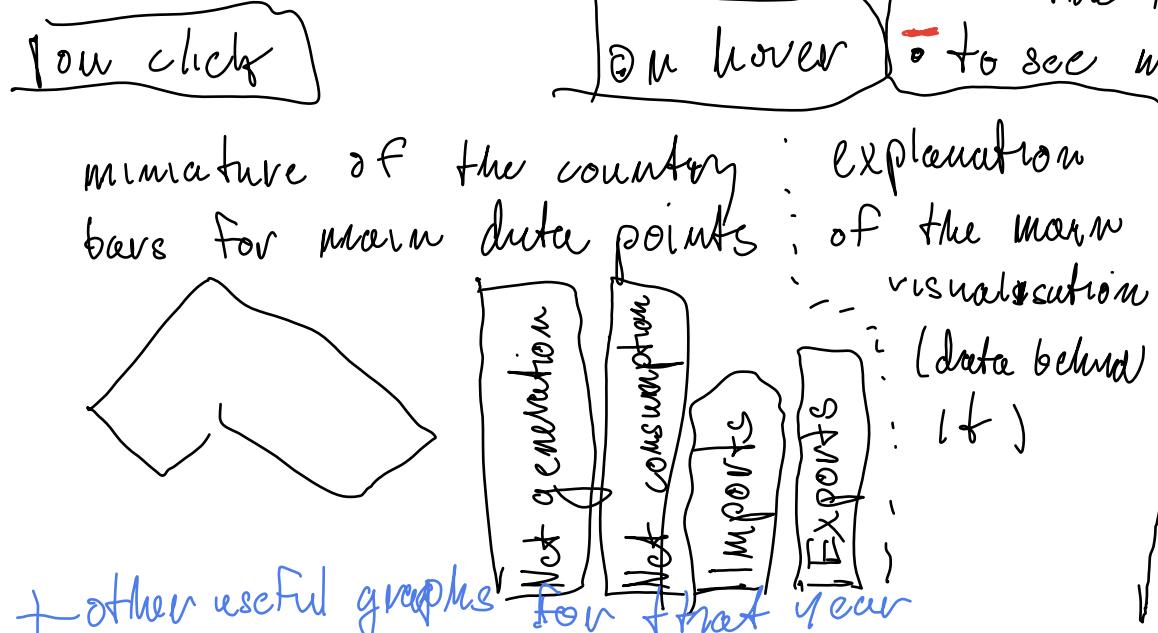

BLU - Import vs Export, ..

↳ these will be colour scales

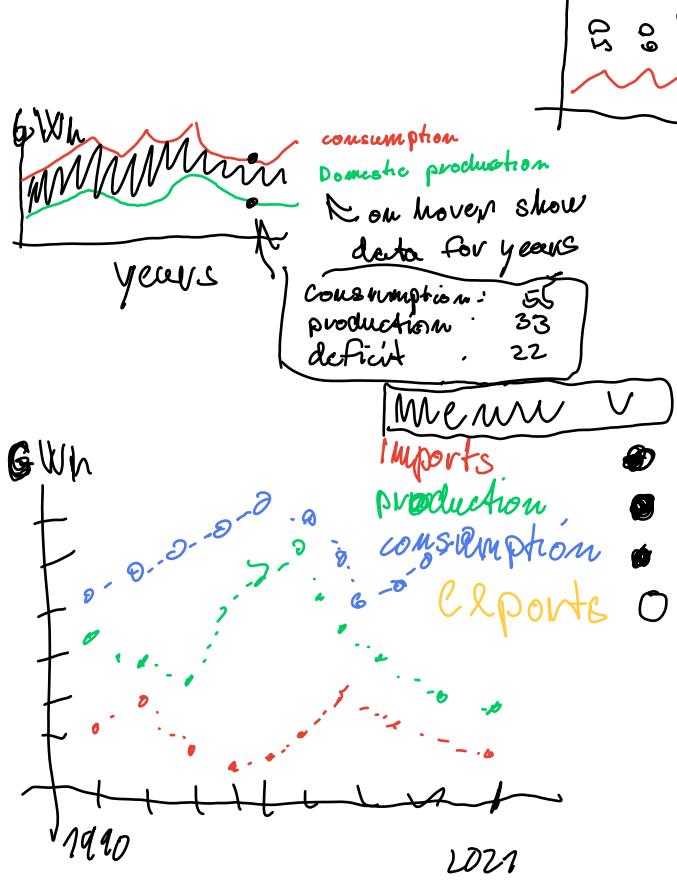

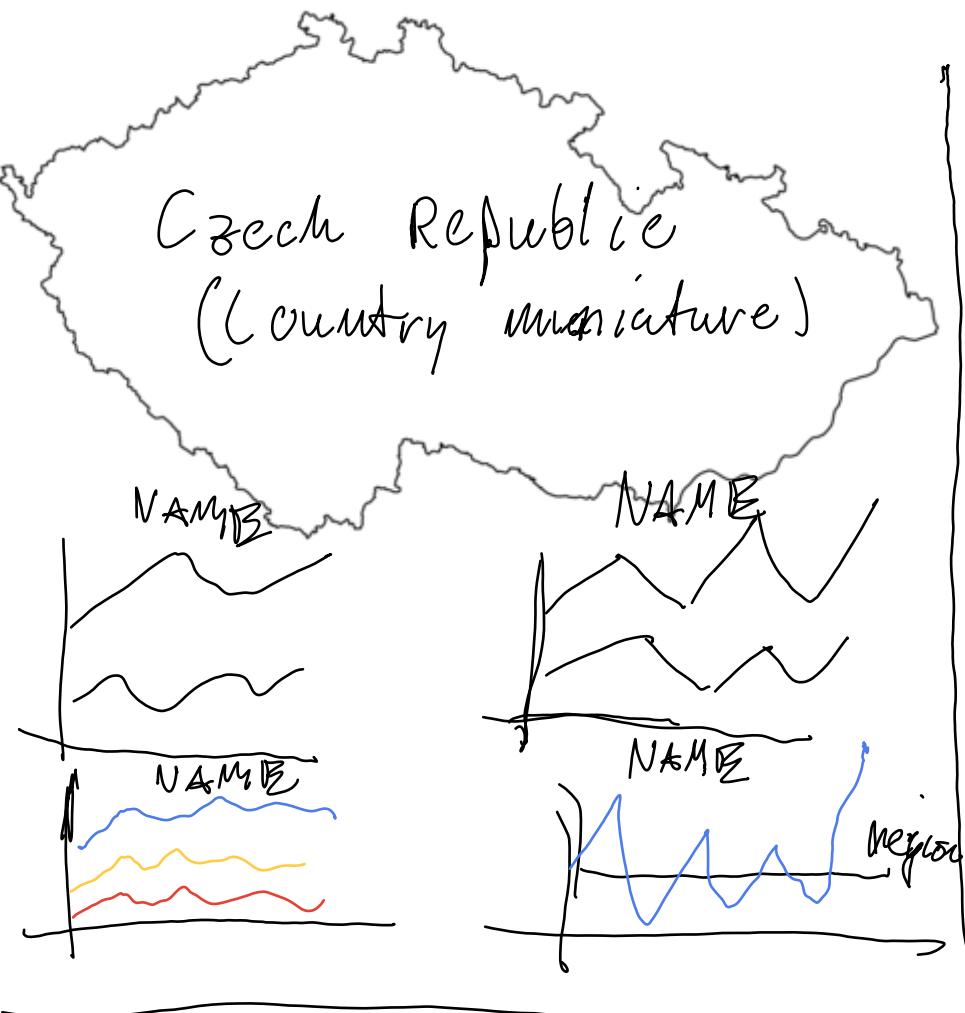

OPERATIONS

DISCUSSION

- not enough data visible on the first glance
- to see most things user has to click on the country

- not that much clutter on screen
- supports the timeline view of the data

- Title: Global energy statistics
Name: Petr Kadlec, 485208
Task: Country detail
- Show the trend of the measured variables
 - never to see in details what's the data, differences
 - user can select what interests them (include/exclude graphs with variable)
 - can be really messy with the amount of graphs
 - can be confusing with the selection of what to show
 - easy to see lots of details/insights
 - the year from the main visualization has no effect here
 - supports the detail insights about a country
